Subject: Re: JCMC additional Information Request 

Please respond the following :

1. Please indicate how many patients received chemotherapy treatment at the JCMC facility during the period including  
January 1, 2000 to April 1, 2003
2. Please indicate how many patients received treatment with Mytomicin at the JCMC facility during the period including  
January 1, 2000 to April 1, 2003
3. Please indicate how many patients received treatment with Cyclophosphamide at the JCMC facility during the period including January 1, 2000 to April 1, 2003
3. During the period of time including January 1, 2000 and April 1, 2003, please indicate the quantities of Mytomicin and Cyclophosphamide that JCMC purchased and used.
4. During the period of time including January 1, 2000 and April 1, 2003, please indicate the quantities chemotherapy agents, other than Mytomicin and Cyclophosphamide, that JCMC purchased and used.

Your prompt attention to this matter will be appreciated,  
Marianna

Subject: RE: JCMC additional Information Request

marianna,

i am responding to your 1/28/04 12:21PM email RE: JCMC additional information request.

1. The JCMC from 1/1/00-4/30/03 had 7,500 chemotherapy encounters. The JCMC IS system does not correlate this information by patient name only by encounters. The JCMC has chosen timeframes closest to your request and within our IS correlation. A patient could have multi encounters in a year.

2. The JCMC from 1/1/00-12/31/03 had 26 mitomycin encounters.

3. The JCMC from 1/1/00 -12/31/03 had 331 cyclophamide encounters.

Responses to questions 4 and 5 will be emailed to you tomorrow.

Subject: FW: JCMC additional Information Request

Marianna,

i am responding to your 1/28/04 12:21PM email RE: JCMC additional information request, questions 4 and 5. This information has been faxed to you in a chart form.

4. It was agreed by both the EPA and JCMC that the JCMC would supply only the requested information for the year 2003. (JCMC has this information on a IS database starting in 2003).

5. It was agreed by both the EPA and JCMC that the JCMC would supply only the requested information for the year 2003. (JCMC has this information on a IS database starting in 2003).

The faxed chart shows the amount in milligrams of "chemotherapy" purchased and used in 2003; based on wholesaler purchase reports and patient pharmacy profile reports. To determine amount wasted in 2003 would/could only be an estimate for the following reasons. 1. inventory is carried from one year to the next. 2. drug product is borrowed from and by other hospitals/pharmacies. 3. drug product is returned for expired dating.

As presented by the chart it is evident that the JCMC has a low volume of use of U058 and U010 and other chemotherapy drugs. It is the JCMC's opinion that since 4/1/03 it has produced chemotherapy waste (U058 and U010) of less than 3% per volume.
